

Ordering empty shoe boxes

Not every pair arrives with a box worth selling. Some come crushed; some come with none at all. So we buy **empty boxes** from the same suppliers, on the same paperwork as the shoes. This is the whole loop — **PH** raises the order, the **supplier** declares and ships it, the **warehouse** counts it in and finally puts a box on a pair. Steps 1–7 are PH and the supplier; steps 8–12 are the warehouse.

PH	SUPPLIER	SUPPLIER	WAREHOUSE	WAREHOUSE
Open the order as an <i>empty boxes</i> order	Declare each box SKU, size, carton, cost	Close & ship print the manifest, attach, ship	Count it in against the same list	Put one on a pair from the No Box queue

THE ONE RULE WORTH LEARNING FIRST

A box is identified by **three** things: the **SKU** of the shoe it belongs to, the **size** it was made for, and its **dimensions**. All three are required. A size 9 box and a size 10 box of the same shoe are two different things to order — even when they measure the same — because the label printed on each box says which size it is. Everything else in this document follows from that.

1 PH: open the order as an empty-boxes order

1. Go to **New Batch (Purchase Order)**, as you would for shoes.
2. Under **What is this order for?** tap **Empty shoe boxes**. The line under it changes to tell you what the supplier will be asked for.
3. Pick the supplier account, add the tag/code and the shipping labels, and create it.

The choice sits at the top of the form because it changes what the supplier is asked to declare.

LEAVE IT ON SHOES UNLESS YOU MEAN IT

Every order defaults to **Shoes**, and an order raised before this feature existed stays a shoes order. Nothing changes for them.

2 PH: already raised it as shoes? Change it

This happens constantly — the order goes in before anyone says what it is for. It is fixable, and the supplier cannot declare anything until it is fixed.

1. Open the order from **Purchase Orders**.
2. Tap **Edit details**.
3. Switch **What is this order for?** to **Empty shoe boxes** and **Save details**.

Cancel Save details

The same choice, on an order that already exists.

CHANGE IT BEFORE ANYTHING IS DECLARED

Lines already entered are **kept**, but a shoe line's size and a box line's dimensions are different facts — so anything declared under the old kind comes back blank and has to be re-stated. The order's thread records who changed it and when.

A SETTLED ORDER WILL NOT CHANGE

Once an order is **reconciled** or **archived**, its count has been agreed with the supplier and nothing about it can be edited — the kind included.

3 Supplier: open your order and check the chip

1. Sign in to the supplier portal and tap **Purchase Orders**.
2. Open the order you are packing.
3. Look for the **Empty boxes** chip beside the status. If it says **Shoes** instead, **stop** and ask us to change it — you will not be able to enter dimensions until we do.

The chip appears on the list and on the order. The note under it says what you are being asked for.

What every box needs

Four facts. Miss one and the box cannot be checked off when it reaches us.

FIELD	WHAT TO PUT IN IT	WHY WE ASK
SKU	The style code printed on the box — e.g. DD1391-100 .	It is how the box is matched to the shoe that needs it.
Shoe name	Fills in from the SKU. Type it if the lookup cannot find it.	So a person reading the sheet knows what they are holding.
Size	The size on the box's own label — not the size of the shoe you have spare.	A size 9 box only fits a size 9. This is the field that decides the box is useful.
Dimensions	Outside length × width × height — in, cm or mm.	Tells us the shipping bulk, and tells two cartons of one size apart.
Cost each	What that box cost you. Tip if there was one.	It is what we settle with you against.

4 Supplier: add a box

Tap **Add boxes** on the label you are packing, then for each box:

1. **Scan or type the SKU** printed on the empty box. The shoe's name fills in. Scanning the **UPC** instead also fills in the size.
2. **Tap the size** the box is for. Tap it again for a second box of that size, or use **+ Custom** if the size is not listed.
3. **Enter the box dimensions** — length × width × height, measured on the **outside**. Switch **in** to **cm** if that is what your tape reads.
4. **Enter the cost** per box. Leave it blank if you genuinely do not know — blank means "not stated", which is not the same as free.
5. Tap **Add ... to label**.

Add boxes · Label 1

CancelAdd 1 box to label

One box, fully declared. The button stays greyed out until the size and all three dimensions are filled in.

5 Supplier: check the list as it grows

Every box you add appears on the label with its size and its carton. You can correct any of it in place — tap a field, change it, tap away.

Label 1
1Z999AA10123456946 3 boxes

ITEM	SIZE	DIMENSIONS	QTY	COST EA	TIP EA
Nike Dunk Low Retro DD1391-100	10	13 x 9 x 5 in	— x1	+ \$ 3.5	\$ — x
Nike Dunk Low Retro DD1391-100	9	13 x 9 x 5 in	— x1	+ \$ 3.5	\$ — x
Nike Dunk Low Retro DD1391-100	9.5	13 x 9 x 5 in	— x1	+ \$ 3.5	\$ — x

Set box size for 3 lines

Cost \$10.50 \$10.50

Add boxes Review & close box

Three boxes on Label 1. Note the count reads “3 boxes”, not “3 units”.

TWO BOXES THAT BECOME IDENTICAL WILL MERGE

If you correct a line so that its SKU, size *and* dimensions match another line, the two become one line with the quantities added together. That is on purpose — they are the same box.

6 Supplier: one carton size across the whole list

Most orders are a run of sizes that all ship in the same carton. Type it once instead of thirty times.

1. Tap **Set box size for N lines** under the list.
2. Enter the dimensions.
3. Choose **Apply to all N**, or **Only the N still blank** if you have already measured some by hand.

Same box for many lines

Box dimensions

14 x 9.5 x 5 in

Outside of the box — length x width x height.

Apply to all 3 Only the 0 still blank

A line that already carries this exact size is left alone. Anything different is overwritten by “Apply to all”.

“Only the ones still blank” exists so a bulk apply can never overwrite a measurement you took deliberately.

SIZES ARE NEVER TOUCHED

Applying one carton across sizes 8, 9 and 10 leaves you three lines. Only the dimensions change.

7 Supplier: review, close, print, attach, ship

Identical to a shoes order, and in the same order:

1. **Review & close box** when the label is full. It becomes **Ready to ship**.
2. **Print the manifest** on plain **Letter** paper. It now carries a **BOX SIZE** column beside the size, and totals in **boxes**.
3. **Attach it to the box**, then seal it.
4. **Ship the label** once the courier has taken the parcel.

CLOSE ONE BOX AT A TIME

A label is closed and printed as a unit. Reopening a closed box invalidates a sheet you have already printed — so finish one, print it, attach it, and only then start the next.

How an empty-boxes order differs from a shoes order

Everything not in this table is exactly the same.

	SHOES ORDER	EMPTY-BOXES ORDER
Chip on the order	Shoes	Empty boxes
A line is	SKU + size	SKU + size + dimensions
You are asked for	Size, qty, cost, tip	Size, dimensions , qty, cost, tip
One unit is	a pair	a box
Printed manifest	ITEM · SKU · SIZE · PAIRS	ITEM · SKU · SIZE · BOX SIZE · BOXES
Bulk edit	—	Set box size for N lines
Manifest PDF import	Supported	Not supported — those sheets carry shoe sizes, not cartons

If something is not right

WHAT YOU SEE	WHAT TO DO
“This order is for empty shoe boxes — give the box's length, width and height.”	A size on its own is not a declaration. Fill in all three dimensions.
“Say which shoe size this box is for.”	Tap a size chip, or + Custom if the size is not listed.
“This order is for shoes — a pair has a size, not box dimensions.”	The order is still marked as a shoes order. Ask us to switch it (Step 2).
“Couldn't look up <SKU> — declaring it anyway.”	Harmless. The catalogue only supplies the shoe's <i>name</i> here. Type the name and carry on.
The Add button is greyed out	A row is missing its size or a dimension. The line just above the button says which.
You closed a box too early	Reopen it, fix it, close it again — and reprint the manifest. The old sheet is void.

The warehouse: counting them in

Same wizard as a shipment of shoes. What changes is what you count.

8 Receive against the order

1. Open **Receive New** and tap **Receive against a purchase order**.
2. Find the order — scan the label on the parcel, or pick it from the open list. The **Empty boxes** chip tells you what is inside before you cut the tape.
3. Tap **Add items** on the box you are opening.

The chip is on the picker, on the banner, and on every list — you never have to remember which order was which.

9 Count what is actually in the carton

The screen is the supplier's own list, one row per size and carton. **Nothing is pre-counted** — a number nobody took is worse than no number.

1. If the shipment is complete, tap **Everything arrived as declared**. One tap, not two hundred.
2. Otherwise count each row in with the + / – stepper.
3. A carton that is not on the list at all goes in with + **Add unexpected** — it will read as an overage, which is exactly what it is.
4. Submit the box.

The screenshot shows a mobile application interface for tracking a shipment. At the top, it says 'Box 1 · manifest' with a green badge indicating '10 of 10 boxes checked'. Below this is a manifest ID '1Z999AA10123456967'. A button '+ Add unexpected' is in the top right. The main section is titled 'Nike Dunk Low Retro — DD1391-100' and contains two rows of shoe sizes. Each row has a checked checkbox, the size and dimensions, and a stepper with minus, count, and plus buttons. The first row is 'size 9 · 330 x 230 x 130 mm · exp 6' with a count of 6. The second row is 'size 12 · 355 x 240 x 135 mm · exp 4' with a count of 4. At the bottom, a note reads: 'Check each row off as you count it out of the carton. Anything left unchecked is recorded as a shortage; use the stepper for a partial, and "Add unexpected" for boxes that aren't on the PO.'

Size	Dimensions	Exp	Count
size 9	330 x 230 x 130 mm	exp 6	6
size 12	355 x 240 x 135 mm	exp 4	4

Each row is a **size** and the **carton** it ships in — the same shoe in two carton sizes is two rows, because they are two different things to count.

NO STICKERS ARE PRINTED

Empty boxes get no 1ID label. A box's label is the shoe box label, printed from **Box Labels** when the carton finally goes on a pair.

10 Settle it with the supplier

PO Reconciliation compares what was declared against what you counted, per shoe and size, and says so in boxes.

Download: [PDF](#) [CSV](#) ☐ Prices

⬇ Per box

⬇ Whole order

What was declared for this order, one page per label — the only one with tracking numbers. Print it and tick pairs off as you unpack.

Everything declared as one merged list, no boxes. The total — for checking an invoice, or a manifest they just submitted.

⬇ What we received

⬇ Discrepancies by box

Our own count, box by box, with their list beside it. This is the sheet you send a supplier when a shipment is short.

Only the boxes that disagree, and by how much. The short sheet you carry back into the warehouse to re-check them.

A clean shipment reads **no difference** and closes itself. This one is one carton short, and says which.

THE REPORTS ARE THE SAME FOUR

What we received is the sheet to send a supplier when a box shipment is short; **Discrepancies by box** is the short version you carry back to the shelf.

11 Shelf them, then find one when you need it

- Put them away with **Shelve / Put-away**, exactly like shoes. Boxes have their own **To shelve** count on the home screen so they never inflate the shoe backlog.
- When you want one, open **Empty Box Stock** and search by **SKU or size** — that is how the question gets asked: “*is there a box for a 10.5 Panda?*”

The empty shoe boxes we hold, for pairs that arrived crushed or with no box. Bought on a purchase order marked **Empty boxes**. To put one on a pair, use **Use a box from stock** in the **No Box** queue — that's where we know it fits.

Shoe

SKU

Size

Name, SKU or carton size

e.g. DD1391-100

e.g. 10.5

9 boxes on hand across 2 lines

Nike Dunk Low Retro	DD1391-100
US 9 330 x 230 x 130 mm	not shelved yet 6
US 12 355 x 240 x 135 mm	not shelved yet 3

Grouped shoe → size → carton, with where they are sitting. Thirty identical boxes are one line, not thirty.

Putting a box on a pair

The reason all of this exists.

12 Spend a box from the No Box queue

You do this **from the pair**, not from the stock screen — the No Box queue is the only place that knows which boxes fit.

1. Open **No Box / Not Ready** and find the pair.
2. Tap **Use a box from stock**. Only boxes matching that shoe and size are offered.
3. Tap **Use one**.

Identical cartons on one shelf are a single choice. The oldest is taken, so stock rotates on its own.

WHAT HAPPENS WHEN YOU TAP IT

The **pair** becomes With Box and drops out of this queue, ready to shelve and sell. The **box** is spent: it leaves the shelf, is marked **Used on a pair**, and both records carry the link. That is how “what happened to the forty boxes we bought” has an answer.

A BOX IS SPENT ONCE

Used is final. A carton that has gone onto a shoe can never be shelved or handed out again — the same rule that stops a pair being sold twice.

IF YOU SOURCED A BOX ANOTHER WAY

Use **Box found** → **With Box** instead. It makes the pair sellable without spending anything from stock, which keeps the count honest.

If something is not right — warehouse

WHAT YOU SEE	WHAT TO DO
The order isn't in the Receive against a purchase order list	The supplier hasn't shipped a label yet, or it's already reconciled. Search the tracking number to pull it up.
A row has no carton size	The supplier left it blank. Count it in anyway — the count is the point; the dimensions can be fixed on the order.
A carton in the parcel isn't on the list	+ Add unexpected . It reads as an overage, which is the truth.
Use a box from stock says none in stock	Nothing on the shelf fits that shoe <i>and</i> size. Either order some, or use Box found if you have one from elsewhere.
Empty boxes in the shoe backlog	They aren't. Boxes have their own To shelve and On hand counts on the Empty Box Stock card.
The PH team asks about a box order	They can't see one at all, by design — boxes are never priced or listed. Answer from Empty Box Stock .

Stickballman12 LLC · Empty Shoe Boxes SOP · September 2, 2026 · Questions about a specific order go in the group chat with its PO code.
