

Start the shipment yourself

The order changed. We used to buy the shipping labels first and build the order around them. Now we want **your list before we buy the labels** — so you open the shipment, say what you packed, and ask for labels when you're ready. Nothing you already know how to do goes away; it just happens in a different order.

STEP 1

Open a shipment
say how many boxes

STEP 2

List each box
what went into it

STEP 3

Ask for labels
when it's all in

STEP 4

We send labels
numbers appear on
your boxes

STEP 5

Print & ship
attach, seal, hand over

WHAT CHANGED, IN ONE LINE

You no longer wait for us before you can start. Pack, list, **then** ask — and you can print each box's manifest and seal it while the labels are still coming.

WE CAN STILL OPEN ONE FOR YOU

Nothing about the old way is gone. If we open a shipment for you with the labels already on it, it appears in your list exactly as before and you fill it the same way. Both kinds live in the same list.

1 Open the shipment

1. On **Purchase Orders**, tap **+ New shipment**.
2. Say whether it's **shoes** or **empty shoe boxes** — that decides what you're asked for on every item.
3. Enter **how many boxes** you packed. A tag or name is optional but helps us both find it later.
4. Tap **Open shipment**.

New shipment

Open it now, list what you packed, then ask us for labels — we'll put the tracking numbers on afterwards.

What are you sending?

Shoes

Empty shoe boxes

A shipment of pairs. You'll give each one a SKU and size.

How many boxes? Tag / name (optional)

4

Last Dance

You can add or remove boxes later, right up until one ships.

Cancel

Open shipment

Boxes can be added or removed afterwards — the number here is just a starting point.

2 List what went into each box

Your shipment opens with one card per box. They are numbered **Box 1**, **Box 2** ... and stay numbered — that number is how we'll talk about them until the labels arrive.

1. Tap **Add items** on the box you packed first.
2. Scan or type the SKU, tap the sizes, enter the cost. Exactly as before.
3. Repeat for each box. + **Add a box** if you packed more than you said; **Remove** on a box you didn't end up using.

PO-103051 · Last Dance

Filling

Shoes

From Nine Line Kicks

List what you packed in each box, then **ask for labels**. We put the tracking numbers on afterwards, so you can print each box's manifest and seal it while you wait.

+ Add a box

Ask for labels

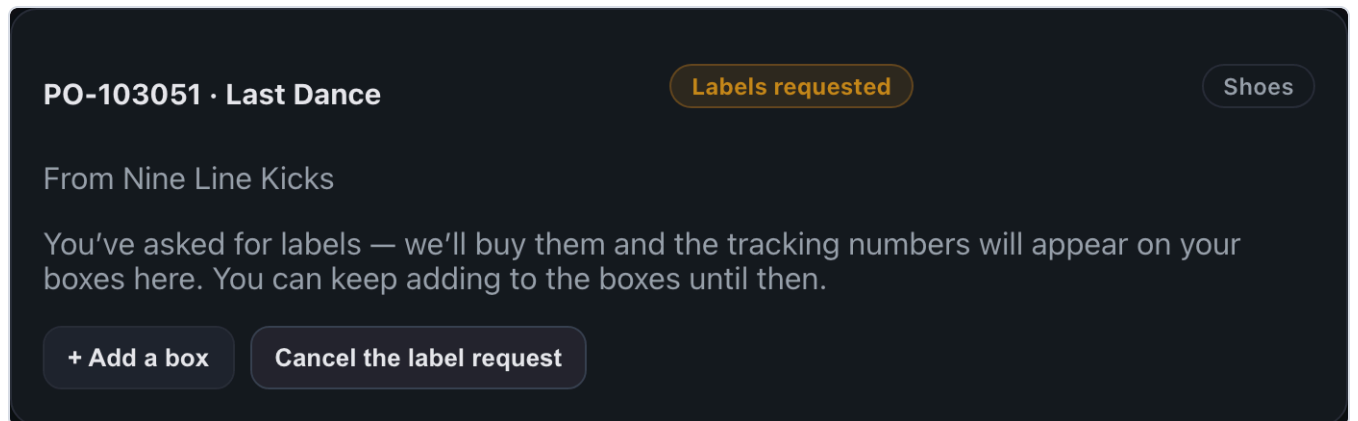

Four boxes, no labels yet. Each says so plainly rather than showing a blank tracking number.

ADD AND REMOVE FREELY

You can change the number of boxes right up until one **ships**. After that the box is a record of something that physically left, so it stays — tell us and we'll sort it out.

3 Ask for labels

When every box is listed, tap **Ask for labels**. That is the whole handoff.

The chip changes to **Labels requested**, and the same words appear on our side.

YOU CAN'T ASK FOR LABELS ON AN EMPTY SHIPMENT

If nothing is listed yet, the button refuses — the reason we changed the order of all this is so we see what's in the boxes *before* we buy labels for them.

CHANGED YOUR MIND?

Cancel the label request puts it back. Adding a box after you've asked is fine too — just ask again once it's listed.

Print the manifest and seal the box — don't wait for us

This is the part that saves you a day.

You do **not** have to wait for labels to finish packing. Close a box, print its manifest, tape it inside and seal it. The sheet identifies the box by its **number**, in large type, and says plainly that the label is still coming:

WHAT THE SHEET SAYS BEFORE THE LABEL EXISTS

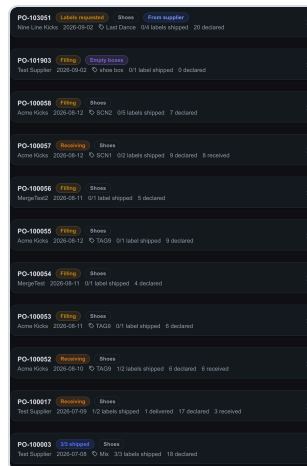

BOX 3 OF 6 · NO SHIPPING LABEL YET — identify this box by its NUMBER until the label arrives.

THE SOFT COPY UPDATES ITSELF

Once we assign the labels, **download the manifest again** and the same sheet comes out with the tracking number on it. Nothing to re-request and no new link — the file is built fresh every time you download it. Reprint only if you need the paper copy to carry the number too.

What we do at our end

So you know what “Labels requested” sets off.

PO-103051	Labels requested	Shows	From supplier	2025-08-02	01 Last Dance	014 labels shipped	20 declared
PO-101983	Filtering	Shows boxes		2025-08-02	01 show box	011 label shipped	0 declared

PO-100054	Filtering	Shows		2025-08-11	011 label shipped	4 declared	
PO-100053	Filtering	Shows		2025-08-11	01 7949	011 label shipped	0 declared
PO-100052	Requesting	Shows		2025-08-12	01 7949	112 labels shipped	0 declared 8 received
PO-100017	Requesting	Shows		2025-07-09	112 labels shipped	1 delivered	17 declared 3 received
PO-100063	112 shipped	Shows		2025-07-08	01 Min	313 labels shipped	10 declared

Your shipment shows in our list shipped **Labels requested** and **From supplier**, and it badges our home screen until somebody acts on it.

4 We buy the labels and put them on your boxes

We buy a sheet for the number of boxes you declared and drop it into the order. The tracking numbers are read off each page and laid onto your boxes **in order** — page 1 onto Box 1 — and we check every row before saving.

Drop the sheet you bought from the courier. Its tracking numbers are read off each page and laid onto the boxes **in order** — page 1 onto box 1. **Check every row before saving**: if the courier returned the pages in a different order, this is the only place to catch it.

Drag & drop the labels PDF, or [browse](#)
Or type the numbers in by hand below.

Box 1	Tracking number	— Courier — ▼
Box 2	Tracking number	— Courier — ▼
Box 3	Tracking number	— Courier — ▼
Box 4	Tracking number	— Courier — ▼

Cancel Assign 0 label(s)

One row per box you declared. If the courier returns the pages out of order, this screen is where it gets caught.

WHY THIS MATTERS TO YOU

The box that ends up with **Label 3** is the box you called **Box 3**. The manifest you already sealed inside it stays correct.

5 Print, attach, ship

The tracking numbers appear on your boxes and the cards change from **Box** to **Label**. From here it is exactly the flow you already know:

1. **Download all labels** (or the one for the box you're holding) and print it.
2. Attach the label to the outside.
3. **Ship label** once the courier has taken it.

Review & close box

The same box after we assigned the labels — **Box 1** is now **Label 1**, with its number and courier on it.

Old way vs. new way

Both still work. This is only what moved.

	WE OPEN IT (OLD, STILL FINE)	YOU OPEN IT (NEW)
Who starts	Stickballman12	You
Labels	Bought first; already on the order	Bought after you ask
You wait for us	Before you can start	Only for the labels
A box is called	Label 1, from the start	Box 1 until it has a label, then Label 1
Manifest	Has the tracking number on it	Box number first; tracking appears once assigned
Add / remove boxes	Ask us	Yourself, until one ships

If something is not right

WHAT YOU SEE	WHAT TO DO
"Add the boxes you packed before asking for labels."	The shipment has no boxes on it. Add one, list what's in it, then ask.
"Nothing is declared on this order yet."	The boxes exist but are empty. Tap Add items on each one first.
You need one more box after asking	Add it and list it — then ask again so we know to buy another label.
A box shows Remove but you can't remove it	It has already shipped. Message us; a shipped box is a record of something that left.
The manifest has no tracking number	Correct — the labels aren't assigned yet. Seal the box; download the sheet again afterwards for the version with the number.
The label on a box looks like the wrong one	Tell us before you ship it. We assign them in box order and can reassign any of them.
